## GENERAL.

The continued expansion in the work force indicates the current high level of economic activity in the State. The output of coal attained a record level, and that of iron and steel, its highest since the war, but labour, power and raw materials remain insufficient for the growing demand. Electricity supplies to industry and homes are subject to frequent interruptions although generation has been slowly increasing. Output of building materials and home building activity did not increase appreciably during the current year.

Trading bank figures reflect the continuing monetary expansion, and index movements show that the upward trend in home and export prices in Australia accelerated during the current year.

## PART I : EMPLOYMENT, BUILDING AND NON-RURAL INDUSTRIES.

An increase of 5,300, mainly females, brought employment in October 1950 to the record figure of 1,031,900. The increase in the year ended October dropped from 108,900 in the demobilisation period from 1945 to 1946 to 21,200 from 1948 to 1949 but rose to 21,200 between 1949 and 1950, mainly because of the inflow of migrants. Male employment in October 1950 was 41% and female employment 70% higher than at outbreak of war. These figures exclude the rural labour force and female domestics in private households both of which are now probably less than before the war.

### WAGE & SALARY EARNERS - NEW SOUTH WALES, excl. rural workers and domestics in private households - in thousands.

| October - 1945 | 537.3       | 243.5    | 780.8  |                            |          |        |
| 1946           | 642.9       | 246.8    | 889.7  | 105.6                      | 3.3      | 108.9  |
| 1947           | 686.4       | 258.3    | 944.7  | 43.5                       | 11.5     | 55.0   |
| 1948           | 704.7       | 267.5    | 972.2  | 18.3                       | 9.2      | 27.5   |
| 1949           | 720.2       | 273.2    | 993.4  | 15.5                       | 5.7      | 21.2   |
| 1950           | 746.2       | 285.7    | 1031.9 | 26.0                       | 12.5     | 38.5   |

During October 1950 factories gained 1,800 and retail staffs 2,100 and there were smaller increases in most other groups. Employment in the building industries rose by 12% in the twelve months ended October but the increase on pre-war remains proportionately smaller than for other industries. Employment in wholesale trade, banking and insurance has also risen appreciably during the current year. Expansion in retail staffs has lagged compared with other groups; the increase during October was probably largely seasonal.

Female employment in all the major groups listed below increased considerably during and since the war, and there have been some notable changes in distribution between the classes and groups. In factories the metal trades now employ four times as many women as before the war while the rise in the classes which rely most on women labour, food and clothing, /has been...

has been much smaller in comparison. The transport & communication group (mainly in the P.M.G. Department) and those in commercial occupations increased very considerably, but a smaller proportion now work in retail stores.

EMPLOYMENT OF WOMEN - NEW SOUTH WALES.

COAL PRODUCTION - New South Wales.

Coal output in New South Wales has been maintained at the rate of 250,000 tons to 290,000 tons a week in recent months. The total for the 48 weeks ended 2nd December, 11.86 mill. tons, exceeded the output for the corresponding period in any previous year. The previous annual record of 12.21 mill. tons in 1942 was surpassed by the middle of December 1950. An important factor in the production rise during the year was the expansion of open-out mines which contributed one eighth of total production.

INDUSTRIAL DISPUTES - New South Wales.

Dispute losses in October in New South Wales coal mines and in other industries, 32,000 and 75,000 man-working days, were the highest for some time. The principal disputes, apart from mine disputes, were those due to demands for wage increases in glass, sheet-metal and wool storage industries, and one-day stoppages by railway men, iron workers and waterside workers for reasons other than wage claims.

GAS AND ELECTRICITY - New South Wales and Sydney.

Gas and electricity production in the State in October 1950 were 2% and 11% higher than in October 1949 but the electricity supply remains insufficient for the increasing domestic and industrial demand. The index of gas and electricity consumption in Sydney is now nearly twice as high as the 1937-39 average.

#### IRON & STEEL PRODUCTION - New South Wales.

Pig iron production in New South Wales has been maintained at the rate of over 100,000 tons a month since August with a corresponding improvement in steel output. Production of both iron and steel in the first ten months of 1950 has been the highest for that period since the war but has not yet regained the level of the early war years. Output of certain metal products, such as engines, motors and motor bodies has also increased considerably during the current year.

#### NEW BUILDING - New South Wales.

Commencements of new houses and flats in New South Wales rose from an average of about 1,900 a month in 1948 and 1949 to over 2,000 in the first three quarters of 1950, but completions in 1950 averaged only 1,600 a month, hardly more than in previous years, and the number of uncompleted dwellings rose to 29,810 at the end of September 1950. If all buildings were completed in order of their commencement those finished during the current quarter (December 1950) would be mainly the ones begun about 15 months ago, in September quarter 1949. Completions in September quarter 1950, 4,775 houses and 220 flat units, were about the same as in the previous quarter and in September quarter 1949. During the past four years about 65,750 houses and 2,900 flat units have been completed in New South Wales, a fifth of them having been built by Government authorities.

#### PRODUCTION OF BUILDING MATERIALS AND FITTINGS - New South Wales.

Output of some important building materials fell off in September quarter 1950 because of bad weather and transport dislocations. The supply of sawn timber from native logs was considerably less than in the same period of earlier years, and the same was true of terracotta tiles, but the rising production of cement tiles (now equivalent to over one half of the terracotta output) made up for some of the deficiency in that field. There was some improvement in brick production though the pre-war level has not yet been regained. Expansion in the production of cement and building sheets (fibrous plaster and asbestos cement) continued during the year.

Production of building fittings in September quarter 1950, was greater than in the strike period of 1949 but, in many cases, less than in earlier months of 1950. Notable increases in production were recorded during the current year in gas stoves and electric bath heaters and hot water systems.

x. Production reduced because of coal strike.

NEW SOUTH WALES RAILWAYS.

During the four months ended October 1950 railway traffic in New South Wales was maintained at a comparatively high level and gross revenue reached the record figure (for that period) of £14.58 mill. But mounting expenses led to a deficiency on working account in three of the four months, making a total deficiency of £380,000 for the period, while in earlier post-war years this period yielded a surplus of about £2 mill. (excepting 1949 when the coal strike reduced earnings). The 1950 result does not yet reflect the effect of recent freight and fare increases which came into effect on 16th October and 1st November, 1950 respectively.

(a) Excess of gross earnings over working expenses; excluding Government contribution £800,000 for developmental lines and Commonwealth grant.

MOTOR VEHICLE REGISTRATIONS - New South Wales.

Registrations of new cars in New South Wales have averaged about 4,200 a month during the first ten months of the current year, that is about twice the 1948-49 figure, and registrations of new commercial vehicles have nearly trebled during the past three years. The number of cars on the State register at end of October, 1950, 284,089, was 18% higher than a year ago and a third more than pre war. Lorries, utilities and vans registered have doubled since the end of the war.

PART II : FINANCE AND TRADE.

TRADING BANKS - Australia.

Continued monetary expansion is reflected in records in trading bank deposits and advances in October 1950. Deposits rose seasonally from £983 mill. in August 1950 to £1,057 mill. in October, or more than double the rise in the first two months of the 1948 and 1949 export seasons. During the year ended October 1950 current deposits increased by £198 mill. (33%) and interest-bearing deposits by £38 mill. (18%). The rise in bank loans has gained momentum in recent months; they were £401 mill. in October 1949, £444 mill. in August 1950 and £465 mill. in October, a rise of 16% over the year. As a counter-measure to bank credit expansion the Commonwealth Bank raised its Special Account requirements to £459 mill. in October 1950; that is 43½% of total deposits, compared with about 37% in October 1947, 1948 and 1949. In addition, the Commonwealth Bank (as announced on 29th November 1950) has asked all trading banks to exercise stricter qualitative control so as to limit the inflationary effect of bank financed expenditure, particularly on capital goods; only fluctuating operating requirements are to be financed by the banks while capital funds should be raised from outside. This replaces the Bank's directive of 17/5/1949, which had stated that the banks should make development advances only for propositions of sound economic value and if finance cannot reasonably be obtained from other sources.

PRINCIPAL TRADING BANKS - Business within Australia - £ million.

(a) Following technical adjustments in bank returns, deposits and advances were reduced by £9m. as from January, 1949, and a further £3m. in July, 1949.

SAVINGS BANK DEPOSITS.

Accumulation of savings deposits has slowed down in recent months. New deposits with the Commonwealth Savings Bank in this State have risen from about £16 mill. a month in the middle of 1949 to an average of £18 mill. but withdrawals have risen a little faster. Small up and down movements in total balances resulted in an increase of £400,000 in the four months ended October 1950 compared with rises in the corresponding period of £3.4 mill. in 1949 and £800,000 in 1948.

Deposits with all savings banks in Australia rose from £766.5 mill. at end of September, 1950 to a new peak of £766.6 mill. at end of October. Accumulation of savings in Victoria and South Australia has proceeded faster than in the other States in recent years. Percentage increase in savings deposits (all Savings Banks) during five years ended October 1950 were: New South Wales 23½%; Queensland 11%; Western Australia 18%; Victoria 34%; Tasmania 36%; South Australia 50%.

# SYDNEY STOCK EXCHANGE.

A strong upward movement in share prices which began in the middle of October continued until the last week of November, raising industrial shares by about 10% to record levels. Then, in conformity with the reaction of over-sea markets to the Korean crisis, industrial shares dropped by about 4% in one day (30th November), and early in December they were back at the level of early November. The monthly index for November reached new records in all but the public utilities series. The index for 75 companies was 28% higher than a year previously and 46% more than in December 1946 when wartime restrictions on share trading were lifted. The industrial, retail, insurance and pastoral finance series rose to over double the 1939 figures.

## INDEX OF SHARE PRICES - Sydney (Compiled by N.S.W. Govt. Statistician).

| Month          | Manufact'g & Distributing | Retail | Public Utilities | Pastoral Finance | Insurance | Total 75 Companies | 34 Active Shares |

(Regulations restricting trading and private movement in company shares, imposed in February, 1942, with subsequent amendments, were rescinded in January, 1947).

## RETAIL TRADE - LARGE SYDNEY STORES.

Retail turnover in large Sydney stores increased substantially in the September quarter of 1950. The Commonwealth Bank index (seasonally adjusted) which had been fairly steady at 160% to 170% above 1938-39 between November 1949 and June 1950 rose to over 200% above 1938-39 in August and September 1950. Comparing September quarters 1950 and 1949 the rise was about 33%, this was partly due to low turnovers in 1949 during the coal strike and partly to higher prices. Another factor was probably the buying rush on household piece goods in August 1950. Values of stock held by retail stores have not increased to the same extent as turnovers. Taking 1938-39 = 100 they were 265 in August compared with about 260 toward the end of 1949 and up to 272 earlier in 1950.

## PRICES - Australia.

The post-war upward trend in Australian prices which had shown signs of slackening early in 1949 was resumed after the sterling-dollar devaluation in September and has gained fresh momentum since the middle of 1950. Prices in other countries of the sterling area also moved upwards after devaluation and, in both dollar and sterling countries, since outbreak of the Korean war and the initiation of new armament programmes; but the rises in Australia were generally greater than elsewhere. Between August 1949 and 1950 whole-sale price indexes advanced as follows: Australia by 21%, United Kingdom by 14%, U.S.A. by 9% and Canada by 8%.

The Australian wholesale price index was fairly steady at 85% above pre-war early in 1949. Rises in the series for imported goods after devaluation, and in the home-produced goods series in 1950 brought the total index to 134% above pre-war in September. The largest rise was in the /textile fibres.....

textile fibres series, from 333 in September 1949 to 525 in June 1950 and, after the opening of wool sales, to 755 in September. The other series have now risen to from 100% to 150% above pre-war; building materials advanced by 18% early in the year but have remained steady since, while the food & tobacco series rose by 10% in September quarter 1950.

(a) Including oils, fats and waxes and rubber and hides.

The retail price index ("C" series Sydney) continued to move upward in 1949 and 1950, though at a slower rate than the wholesale price index as the house-rent series (retail index) changed little, and partly because retail prices generally do not fluctuate as much as the wholesale prices of basic materials and foodstuffs. Between September quarters 1949 and 1950 both the food and groceries and the clothing (retail) series advanced by 15%, as against 9% and 13% in the previous year; they are now 80% and 188% respectively above the 1936-39 average. The basic wage (adult males, Sydney) increased from £6.12. 0 in November 1949 to £7. 6. 0 in November 1950 - a rise of 10%.

The export price index (including gold) tended downward in 1948-49 when slight falls in wool, wheat and metals counter-balanced rises in butter, meats and hides. However, after September 1949 increases in wool, wheat and metals began to raise the index and this tendency gained momentum in the middle of 1950 with sharply rising prices of wool, metals and hides. The wool series (which has a weight of 46 out of 100 in the total index) rose 162% between September 1949 and 1950, and the metals series rose 74%, while prices for primary products marketed under long-term contracts showed only small rises. The import price index which had been steady early in 1949 rose markedly after the sterling-dollar devaluation, by 10% between September quarter 1949 and June quarter 1950; later figures are not yet available.

# CASH ORDER TRADE - New South Wales.

The value of cash orders issued in New South Wales in the first nine months of the year rose from £1.86 mill. in 1948 and £1.92 mill. in 1949 to £2.24 mill. in 1950; the 16% rise in 1949-50 corresponds roughly to the advance in the retail price index for clothing, which is one of the principal items bought by means of cash orders. Apart from price rises, some expansion of cash order turnovers is indicated by the increase in the number of orders issued: from 189,000 in the nine months of 1948 and 1949 to 204,000 in 1950. However, considering the growth of retail turnovers in recent years the increase in cash orders has been comparatively slow and this type of finance is now probably of less importance than before the war.

# REAL ESTATE & MORTGAGES - New South Wales.

The number of real estate transactions registered in New South Wales in October and November was a little less than earlier in the year, but their value remained high. The total for the eleven months ended November, 1950, £149 mill. was double that of last year and nearly three times as high as in 1948 and 1947. Mortgage values also rose considerably in 1950 but not quite to the same extent as the value of sales.

# NEW SOUTH WALES ACCOUNTS.

Governmental revenue for the four months ended October rose from £12.30 mill. in 1948 and £13.69 mill. in 1949 to £16 mill. in 1950, mainly because of higher receipts from tax reimbursements, stamp & probate duties and land fees. But Governmental expenditure, including debt charges, rose faster, from £15.11 mill. to £17.41 mill. and £19.25 mill. Increases over July-October, 1949 in revenue from the railways, £1.03 mill., and trams & buses, £120,000, were also much less than the rises in expenditure (£3.78 mill. and £290,000), but effects of recent fare and freight rate increases were not yet felt. Total expenditure for the four months exceeded revenue by £4.06 mill. in 1950, compared with deficiencies of £1.71 mill. and £1.02 mill. in the corresponding periods of 1949 and 1948. It may be noted that tax reimbursements from the Commonwealth are not spread evenly over the year; in the first four months of 1949-50 and 1950-51 only about 22% of the budgeted annual figure was received.

(2) Including in 1949 Commonwealth grants towards losses due to coal strike, £3 mill. for railways and £200,000 for trams and buses.

LIFE ASSURANCE - New South Wales.

New life assurance business in New South Wales continued to expand during the current year, mainly through higher amounts being assured per policy. The number of new policies issued in the industrial department is falling slightly, and the number of new ordinary policies issued in the first nine months of 1950, 70,400, though higher than in 1949 was below the 1948 figure for the nine months (70,900). However, the total sum assured in the nine months of 1950, £50 mill., was well in advance of the amounts for the same periods of previous years. The average sum per new ordinary policy in September quarter 1950 was £591 compared with £537 in the year 1949 and £360 in 1939.

| 1949           | 92.4                 | 49.66        | 114.9                 | 11.43        | 61.09  |
| 9 Months ended |                      |              |                       |              |  |
| Sept - 1949    | 67.3                 | 34.94        | 85.4                  | 8.48         | 43.42  |
| 1950           | 70.4                 | 41.60        | 81.6                  | 8.52         | 50.12  |

The total sum assured on life policies in New South Wales increased by about £33 mill. in each 1946 and 1947 and by £38 mill. in each 1948 and 1949. The total at the end of 1949, £422 mill., was more than double the 1939 figure with a corresponding rise in annual premium payments from £7.6 mill. in 1939 to £16.3 mill. in 1949. The proportionately slower rise in bonus additions, from £29 mill. to £38.7 mill. points to lower net earnings by assurance companies, probably because of the lower level of interest rates. The number of policies increased by 60% to 2,216,000 during the ten years. In 1949 about 256 ordinary and 441 industrial policies were in force per 1,000 of population, and the sum assured averaged £133 per head of population, as against £71 in 1939.

(1) As at balance date of companies, mostly between June and December.

PART III - RURAL INDUSTRIES.

THE SEASON.

After almost normal rainfall in August and September, falls in October and November were from two to four times the seasonal average in most of the State's grazing and farming districts. In November, Northern and Central parts in particular experienced very heavy rainfalls and further floods occurred in the Western rivers. The wet weather has greatly reduced the prospective wheat yield. Pastures are in good condition but considerable stock losses have occurred through rain and floods.

LIVESTOCK - Australia.

Sheep numbers in Australia recovered from 96 mill. in the drought years 1946 and 1947 to 113 mill. in 1950, but were still 10% below the record of 125 mill. in 1942. Lambing results have been fairly good during the past three years, and slaughterings were reduced to permit restocking. Recovery in New South Wales after the drought period has been comparatively rapid and the State figure for 1950 (53 mill.) was equivalent to 47% of the Australian total, compared with an average of 45% in the previous twelve years.

The number of dairy cows (in milk and dry) in Australia rose from 3.0 mill. in 1947 to 3.19 mill. in 1950 (it had been 3.25 mill. in 1941 and 1942) but whole milk production (for all purposes) in 1949-50 reached the 1939-40 peak of 1,250 mill. gallons. Proportionately the number of dairy cattle has declined in New South Wales and Queensland and increased in the Southern States. Beef cattle numbers have risen in all States in recent years, reaching the record figure of 9 $\frac{3}{4}$  mill. in 1950. Pig numbers have been decreasing each year, from 1.74 mill. in 1944 to 1.12 mill. in 1950.

WOOL.

The 1950-51 wool selling season in New South Wales started off with a comparatively small carry-over from 1949-50 and receipts of new season's wool in July-October were less than in the two previous years, apparently because unseasonable weather delayed shearing and transport. Sales have proceeded fairly rapidly and at the end of October only 276,000 bales remained unsold in store as against 338,000 bales in October 1949.

<sup>x</sup> Sales and shipments ex store.

Demand for all grades and types of wool has been very keen since the opening of the current season and full clearances were effected at all sales. New record prices were reached for superior fine merino fleeces and lambs wool, but while merino types (e.g. 60/64's and 64/70's) advanced from 4% to 8% in October and November much bigger gains were made in prices of broader types, such as comebacks and crossbreds and of pieces, crutchings etc. The New South Wales average price (full clip basis) for November was 128d a lb. which is more than double the average of the 1949-50 season and ten times the average for the three seasons ended 1938-39.

AVERAGE PRICE OF GREASY WOOL - NEW SOUTH WALES - Pence per lb. greasy.

| Season ended 30th June | d. per lb. | Month (a)       | d. per lb. |
|------------------------|------------|-----------------|------------|
| 1939                   | 10.3       | 1949 - November | 55.5       |
| 1947                   | 23.6       | 1950 - June     | 78.5       |
| 1948                   | 37.9       | - September     | 118.0      |

|                        |            | - December      | 129.0 (b)  |

(a) Average that would be realised if whole clip were sold at price level of that month. (b) Subject to revision.

Sales in Australia for August-October 1950 totalled 968,000 bales, that is about 20,000 bales less than for that period of 1949, but proceeds in the three months of 1950 were £143 mill. or half of total proceeds for that 1949-50 season. In comparison, proceeds for the whole season in the 1930's were between £27 mill. and £60 mill., and for the wartime appraisements between £60 mill. and £74 mill. Shipments from Australia in September-October 1950 totalled 500,000 bales, or 47,000 bales less than for the two months of 1949, while the export value rose from £32 mill. to £72 mill. Main destinations in 1950 were: United Kingdom £20.1 m. (£13.7m. in September-October 1949), France £14 (£5.8m.) U.S.A. £10.1m. (£4.4m.), Belgium £6.5m. (£4.1m.), Japan £5.4m. (£0.7m.) and Germany £5.3m. (£0.9m.)

DAIRYING.

Except in flood-damaged areas dairy districts are now enjoying a very good season. Pastures are in excellent condition and fodder crops growing well. Milk deliveries to butter factories are increasing rapidly and in October 1950 had recovered to the level of October 1949. Butter production for the four months ended October 1950, 20.02 mill. lbs., was still below the 1949 figure of 20.78 mill. lbs., but well in excess of production in 1946, 1947 and 1948.

Deliveries of milk and sweet cream to the Milk Board in September improved considerably over the low level of the three previous months. For the four weeks ended September 21 they totalled 4.24 mill. galls. of milk and 540,000 gall. of sweet cream as against 4.08 mill. and 100,000 gall. in the corresponding period of 1949.
